

Enterprise & Partner Integration Solution

HOW TO RESPOND TO BUSINESS NEEDS FASTER

ARE DISCONNECTED SYSTEMS HOLDING YOU BACK?

- Do your systems and applications make it harder to do business with you?
- Do you need to service-enable functionality from your packaged and legacy applications?
- Are changes to your applications painfully slow?
- Could your best-of-breed systems work better together?
- Do you need to integrate partners and on-board customers faster?
- Are integration costs draining your budget?

Innovate—and integrate—for the business faster.

It's easy with our complete solution

Break free from the costly constraints of point-to-point integrations. Meet business needs faster with Software AG's Enterprise and Partner Integration Solution.

You'll gain a standards-based platform for integrating and service-enabling all applications—inside and outside your enterprise—within a Service-Oriented Architecture (SOA). You can develop new solutions rapidly and streamline information exchange using a combination of application integration, mainframe integration, SOA governance and high-speed messaging technologies.

With Software AG, you can:

- Extend existing IT investments by quickly and efficiently developing new solutions
- Obtain a single view of the business across all system and information silos
- Connect different parts of your organization with service-oriented, event-driven or enterprise application integration
- Interact with trading partners using a flexible, centralized B2B gateway
- Improve visibility into your partner transactions across your complete supply chain

THE SOFTWARE AG DIFFERENCE

Our complete Enterprise and Partner Integration Solution features:

- *An award-winning, standards-based **Enterprise Service Bus (ESB)** to connect any of your existing systems or applications*
- *A **library of adapters** so you can leverage investments in packaged applications, such as SAP, Oracle and even SaaS applications like Salesforce.com*
- ***B2B gateway** tools to streamline your multi-enterprise business processes with end-to-end visibility, transaction security and scalability to meet your growing needs*
- *The market's leading **SOA governance platform**, offering the first integrated Business Service Repository, so you can re-use assets and roll out new innovations—faster*
- ***Mainframe integration** tools to unlock the business data and logic from mainframe systems and to directly integrate with the ESB*

REAL SOLUTIONS FOR YOUR INTEGRATION CHALLENGES

YOUR CHALLENGES	SOFTWARE SOLUTION	HOW YOU BENEFIT
Business-critical information is locked up in siloed systems Point-to-point integrations are brittle and costly to maintain	Proven integration platform: Integrate any existing applications, systems and partners using the webMethods ESB, the most complete enterprise integration infrastructure available	Streamline integration projects, reducing their time and cost Meet the needs of the business faster Support SOA initiatives with a service-oriented ESB Reduce the cost of maintaining and developing applications Extend and integrate existing applications effortlessly using out-of-the-box adapters
The speed, accuracy and efficiency of doing business with your trading partners needs improving Trading partners find it difficult to work with you	B2B integration capabilities: Exchange time-sensitive, critical information with partners, suppliers and customers via a comprehensive, scalable B2B solution that works with a broad range of industry-specific standards	Onboard customers and partners faster Get the right information to the right people rapidly across your supply chain
You've made significant investments into your mainframe systems over the years Now, you need to extract more value from them without investing more	Mainframe integration: By surfacing functionality from existing systems and applications as Web services to the ESB, you can quickly develop new apps and/or orchestrate services to power new business processes. Automated discovery, code analysis and documentation tools make it easy to extract and re-use functionality	Unify view of all enterprise data Deliver high-performing and secure Web services Respond faster to new regulations or market pressures Direct integration with the ESB
You need agile processes and services that you can easily and securely manage to meet business demands and market dynamics	Full SOA lifecycle governance: Catalog and manage services created by the ESB in a Business Service Repository across their lifecycle—in design, production and when changes occur	Create components once and re-use them in many places Innovate—faster—for the business Improve collaboration between business and IT

PROOF OF SUCCESS

Our solution has a proven track record of delivering value and scalability to some of the largest organizations in the world. In fact, our customers include 2/3 of the Global 2000. Here are a few examples:

Connecting partners 95 percent faster—

Elemica uses Software AG technology to create a global business process network for more than 1,800 companies, who conduct business electronically across disparate systems. The company has experienced up to 75 percent reduction in errors and 50 percent reduction in payment time. Order processing time has been reduced by 78 percent.

Integrating efficiently with trading

partners—7-Eleven makes accurate, on-time deliveries to 6,400 stores from 1,700 suppliers. The convenience store chain uses Software AG technology to sync up electronic invoices automatically with financial applications, reducing manual keying and errors.

Increasing data quality—Using Software AG technology, 3Com gained a scalable platform to quickly integrate applications internally and across the supply chain. By embracing SOA, 3Com has streamlined core business processes, reduced IT costs, synchronized master data and secured better real-time visibility into enterprise operations.
