

SAP Redocumentation Service

MAXIMIZE YOUR SAP INVESTMENTS WITH IDS SCHEER CONSULTING

- Do you know how to optimize your SAP processes?
- Are you pressured to get more out of your SAP system?
- Have SAP maintenance costs spiraled out of control?
- Do you have an SAP upgrade project coming up?
- Is SAP forcing you to document your processes for enterprise support?

Mergers and consolidations, required upgrades and user-driven optimization may have put you out of touch with how you actually use your SAP system. IDS Scheer Consulting can help. Our SAP Redocumentation Service provides you with complete, automatically generated documentation on your SAP system in 10 days.

Save thousands of hours documenting your SAP system

Collecting this information on your own would take months—literally thousands of exhaustive man-hours interviewing every SAP user and creating reports. By using our service, you can significantly accelerate the speed of describing the business processes and SAP usage and gain better insight into potential improvements.

Count on the service to help you:

- Speed up your next SAP or process optimization project
- Save time in modeling as-is processes
- Check the quality of your current process documentation
- Learn how to use your SAP system to its full potential
- Get quality results—with little to no effort by your team

Keep maintenance, update and optimization costs under control with detailed knowledge

of your actual business processes and SAP usage. The service also can help you reconcile the requirements of all units within the organization.

Once your usage data is collected, IDS Scheer Consulting will provide you with an ARIS database with all the information. You can analyze this transaction-related data in your SAP system mapped on SAP reference process models.

Process models delivered by the service can be synchronized with SAP® Solution Manager. You can enrich these transparent process models with any additional information (such as end-to-end process models). Analysis of these models will enable you to make the best, most-informed decisions about your SAP usage.

ARIS Business Architect for SAP provides the environment for process design, business process architecture and SOA planning as well as process-based configuration of SAP systems and process execution in SAP.

“The redocumentation of our SAP systems provided in a very short time a solid base for managing our SAP enterprise model by providing transparent and re-usable models.”

Hubb Seelen | Teamlead Sales & Distribution SAP Customer Competence Center | SABIC Europe

HOW THE SERVICE WORKS

The SAP Redocumentation Service starts with an SAP data extraction, followed by data analyses, generation of ARIS models and the delivery of reports, and a high-level presentation of the results.

Transactions and reports

Gain insight into SAP transactions and reports used within the SAP system. This can be specified per user and/or user group. By addressing a certain business function to a user this can help you build up an authorization concept (RACI) in ARIS. This will be reflected in a role diagram in ARIS. The recorded transactions and reports in ARIS are mapped on the reference models of SAP to give insight into what functionality is used and what is not. Customized transactions and reports are stored in a library as they cannot be mapped automatically on the standard SAP reference content. All customized transactions and reports that are not used are delivered as well.

Enterprise structure

The enterprise structure will be built up in ARIS, which gives you easily readable company (financial) enterprise structures as well as logistic enterprise structures. From the SAP enterprise meta model it is easy to navigate to any of the organizational units which are used within the SAP system.

Document types

The document types in your SAP system will be reflected in ARIS with a relationship to the organizational units. The number of times a document type is used per organizational unit type is also calculated from the SAP system. The information on document type usage is useful for comparing the configuration and usage of different organization units within the same SAP system. The information on document types will also help in determining the diversity and importance of (core) processes.

Furthermore, a list of all used (active) user exits is provided and, when required, we are able to compare different SAP clients (instances) with each other based on the information from the redocumentation.

The redocumentation can be used with not only the SAP Business Process Reference models, but also with the customers own business process models, if maintained in ARIS.

WHAT YOU WILL LEARN

How your usage relates to industry best-practice or your process models

Your standard and custom SAP transactions

Your SAP system's organizational units and structures

SAP document types and document type usage

How information is extracted in and across your SAP systems

How you fulfill compliance rules, e.g. segregation of duties

Have questions or want to learn more about the SAP Redocumentation Service? We will be glad to answer your questions – or discuss carrying out a workshop at your company. Please contact us at redocumentation@ids-scheer.com.
