

Get more out of your mainframe

Control workload distribution

Understand your challenges

Monthly License Charge pressure

Nearing capacity limits

Performance issues

Missing batch SLAs

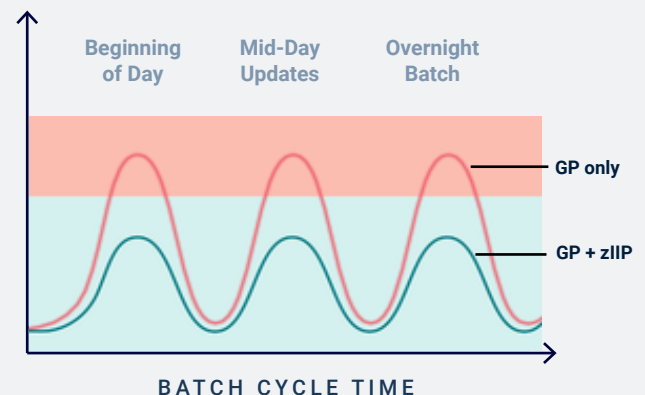

Most solutions come with High risk High cost Major disruption

And don't address the root issue of workload contention at peak.

The Real Solution

Go beyond performance tuning and change how workloads behave.

- Reduce R4HA peaks
- Maximize mainframe ROI
- Unlock latent workloads
- Free capacity to do more
- Improve batch SLAs
- Eliminate manual tuning
- Restart stalled optimization

3 steps to a smarter mainframe:

1

Get started with a JOPAZ Proof-of-Value

2

Run select applications with and without JOPAZ

3

Compare results to determine your GP capacity savings
