

Maximize Mainframe ROI

Real customer results

80%

batch COBOL
capacity savings

100%

functional equivalency
of COBOL code

46%

decrease in wall
clock time

Are these your mainframe challenges?

Monthly
license charge
pressure

Nearing
capacity
limits

Runtime impacting
latent demand

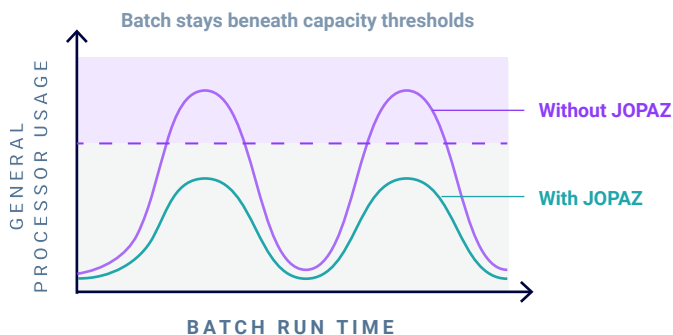

Missing
batch SLAs

Underutilized
zIIP

Peak
workload
contention

What is JOPAZ?

JOPAZ reclaims capacity by making critical workloads eligible for execution on zIIP, dramatically reducing COBOL batch running on the general processor.

Business Outcomes

Optimize for growth & performance

Make room for new initiatives and increasing workload demand by optimizing existing resources. Workloads run faster on zIIP.

Control costs

Eliminate capacity spikes and gain budget predictability. Get more from existing processing resources and extend the life of your mainframe.

Free technical resources

Eliminate the need for time-consuming performance tuning and code optimization so teams can focus on strategic projects.

Optimize the workloads that matter most

Keep COBOL
source code

Leave business
logic intact

Redistribute only
selected workloads

Try a risk-free demo in your own environment
