

INVOICE AUTOMATION

MERGING DECOUPLED SOLUTIONS TOGETHER WITH BPM

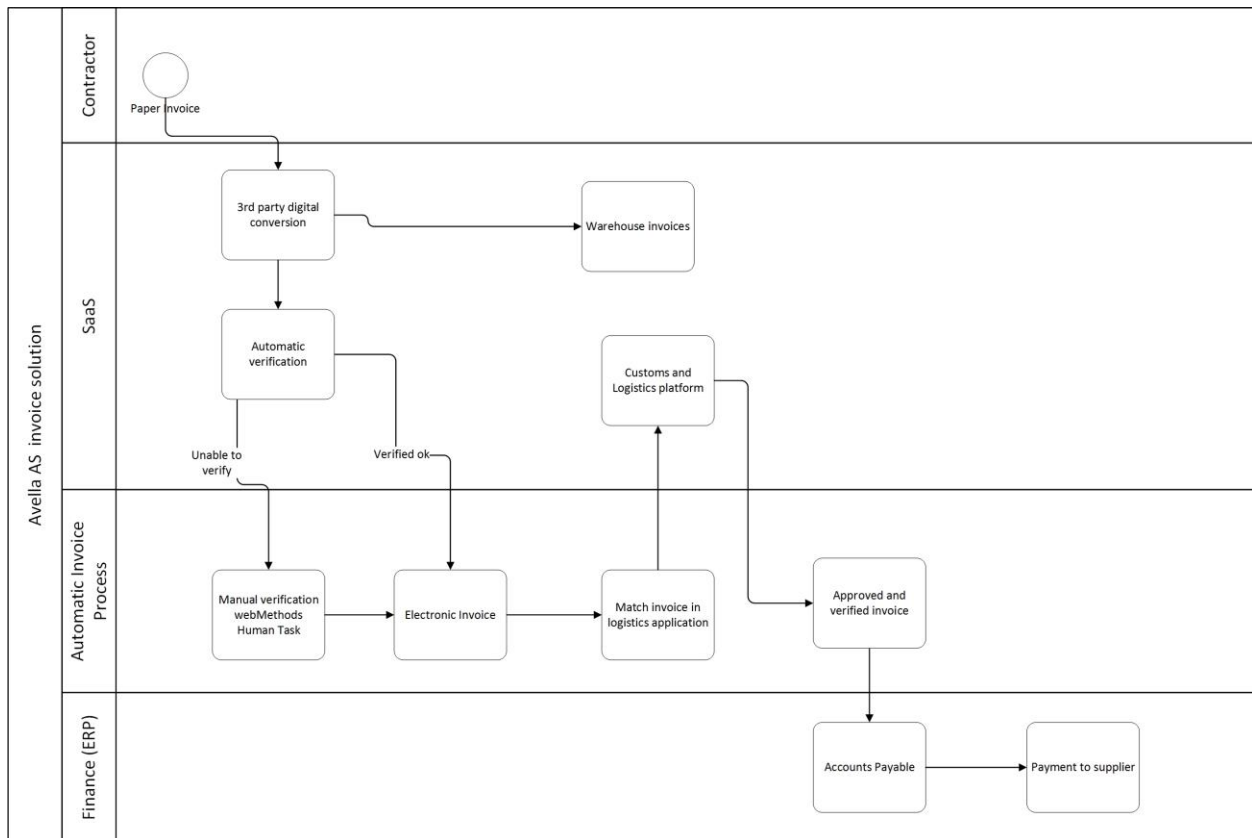

SOLUTION

The solution solves automatic handling of paper invoices scanned in 3rd party OCR application integrated with any ERP solution with the option of supporting a commercial electronic customs filing solution. Using the webMethods platform a BPM process was created to enable end to end visibility from paper invoice to filing in the customer’s ERP Finance module.

BENEFITS

Customer challenge was to secure and optimize invoice and payment process.

The solution secured end to end visibility for customer’s invoice processes. To see outstanding invoices, the CFO office can pull out a report showing completed invoices, pending invoices and even outstanding cash flow. In real time.

SOFTWARE AG PRODUCTS

webMethods Business Process Management

webMethods Integration Server

webMethods SAP Adapter

webMethods Adapter Toolkit (for non-supported ERP solutions)

webMethods JDBC Adapter
