TechMahindra – Cross Country Shipment Solution

Cross County Shipment Solution

- One of our logistics client had the below problem,
- Senders of cross-border shipments are often faced with different product properties and handling requirements per destination country. Whilst client aims to standardize all product features across the network, still there are individual characteristics within each client Parcel Europe destination.
- We have developed a Tool which is a data based platform delivering relevant information regarding destinations' Parcel Connect capabilities within the Parcel Europe network.
- This Tool provides RESTful web service interface with the following functionality:
 - A service which provides the feature set offered by the destination country for the delivery of Parcel Connect
 - The validation of shipment data entered by the sender to prevent missing or false information, according to the product specification of Parcel Connect
 - Information regarding the expected transit times of a shipment from origin to destination
 - In addition to the RESTful web service interface described above, CAMT provides command line interface (CLI) for Solution support to do the following:
 - Import/Export Capabilities Data
 - Import/Export/Delete/Activate/Deactivate Rules
 - Update Settings
 - Import/Export/Delete/Activate/Deactivate Schema

Architecture

CLI

Import/Export Capabilities Data
Import/Export/Delete/Activate/De
activate Rules
Update Settings
Import/Export/Delete/Activate/De

Benefits

Tool will provide-

- A service which provides the feature set offered by the destination country for the delivery of Parcel Connect
- The validation of shipment data entered by the sender to prevent missing or false information, according to the product specification of Parcel Connect
- Information regarding the expected transit times of a shipment from origin to destination
- Alternative delivery methods in case a certain services is not offered within the destination country
