

webMethods Monitoring Dashboard

webMethods Monitoring Dashboard

- ❖ webMethods administrator is responsible for monitoring, configuring, and maintaining the wM Integration Server by ensuring the server is available to client(s), applications, and running at peak performance.
- ❖ The Integration Server Dashboard is the utility used by wM Admin to accomplish administrative monitoring tasks like examine enable/disable services, service usage and performance features.
- ❖ webMethods Server Monitoring Dashboard tool is used to retrieve details from all configured Integration servers where **Admin_wM_Monitoring** package is deployed.
- ❖ This tool can be used to pull all required details based on different parameters as mentioned below from all the configured Integration servers
 - Current Memory Usage
 - Server Up time and Service error count
 - Broker connectivity status
 - Scheduler /Trigger / Ports & Adapter status with element count.

Benefits

- ❖ Easy to identify Integration Server status
- ❖ Identify suspended schedulers/ triggers / ports/ adapters
- ❖ Cross verify Server status and Inactive elements within all configured Integration Servers
- ❖ Check details of inactive elements
- ❖ Saves time and effort
- ❖ Ensure server availability during outages
- ❖ Ease of access to dashboard from any Integration Server
- ❖ Easy to configure new servers
- ❖ Controlled access

Thank You
