ARIS 10 SR 24
Release Notes (Features)

ARIS 10 SR24 feature	Feature description
ARIS Enterprise	
ARIS Enterprise – Admin	
Merge content in the web	As an Admin, you can now merge content from one database to another database. *Based on customer idea ARISD-I-35*
Change list details in the web	Users can now access a detailed view of a database's change list in the browser-based client. The view includes revision information of a model such as model name, model type, the action executed on the model, and the path to the model's group path. Additionally, the users can filter the displayed models based on the revision information.
ARIS Enterprise – Designer	
Select method filter in web repository	Designers can now easily switch method filters to display only relevant symbols. *Based on the customer idea ARISRPA-I-137*
Search for multiple attribute values	For Designers and Admins, locating and managing content in the models and objects repository is now simpler. You can now retrieve models or objects based on multiple predefined values for a single attribute.
DMN decision table in the web	Designers and Admins can now create and edit DMN decision tables in the web without tool breaks, utilizing the full DMN capabilities.
Import/Export DMN in the web	ARIS Designers and Admins can now import and export DMN models in the browser-based client.
Search by GUID in repository	ARIS Designers can now search for models in the repository based on their GUID. *Based on customer idea ARISRPA-I-171*
Spreadsheet modeler in the web	Designers can now create and edit spreadsheet models in the web browser. *Based on customer idea ARISRPA-I-73*
Right-click context menu	ARIS Designers and Admins can now use a right-click context menu when editing models or managing the repository.
Consolidate objects in the web	ARIS Admins and Designers can now consolidate objects in the browser-based client. *Based on customer idea ARISD-I-291*
Import/Export of XML in the web	ARIS Designers and Admins can now import/export ARIS-XMLs in the browser-based clients.

ARIS 10 SR 24
Release Notes (Features)

ARIS 10 SR24 feature	Feature description
ARIS Enterprise – Server/Enterprise Server	
Start model approval workflow from Publish button (shared cloud)	Initiate model approval and publication of content from the Design environment via a "Publish button." *Based on customer idea CFRQ-I-292*
Deactivate legacy functionality	Remove legacy functionalities such as SolMan 7.1 support and standalone views of APG Process Board.
Enhanced look and feel	ARIS users can enjoy UI improvements such as redesigned standard colors. ARIS Admins can now easily configure a white header for ARIS.
Provide removing mentioning of users as an option for collaboration	For advanced privacy settings, Admins can now activate or deactivate the mentioning of users in ARIS Collaboration.
ARIS Enterprise – Viewer	
Accessibility Guideline (EN) 301 549: Add description about accessibility and browser screen reader combinations	Fulfill Guideline (EN) 301 549 criteria by adding documentation about accessibility and browser screen reader combinations.
Add dashboards via WYSIWYG editor	Use the WYSIWYG editor to insert charts, dashboards, or Process Mining dashboards as components of the content overviews in the portal.
New Portal Search takes database filter into account	Viewers searching for content now get a list of search filter criteria based on the source being searched and assigned default database filter.
ARIS Enterprise – Viewer Pro	
Dashboarding for Viewer license	Make dashboarding viewing available for viewer licenses.
Dashboarding in WYSIWYG editor for factsheets	In the redesigned factsheets, enable the addition of dashboards via the WYSISYG editor.
Provide Contribution capabilities (shared cloud)	Contribute additional or expert knowledge via an inline "Edit mode" in the portal. Update or adjust small mistakes or become a pro-active participant by adding more relevant content and references between assets.
ARIS Enterprise – Extension: Risk & Compliance	
Risk & Compliance self-service-configuration to reduce customizing migration effort - Part 3	Basic configuration can now be done by Risk & Compliance self-service-configuration while running installation without XML or code changes. The focus of this feature is on the attributes on forms: • Rename attribute labels • De-/activate business attributes

ARIS 10 SR 24
Release Notes (Features)

ARIS 10 SR24 feature	Feature description
Policy Management - item with current policy roll-out shall show "current" icon in Portal	Users looking at a policy item in ARIS Portal can now see if there is a valid (current) policy-roll-out and can download the current document (of the policy).
Issue Management - Adapt workflow to 1st Line of Defense issue creators	Include an additional role (issue manager) in the workflow to assign responsible people and define how to solve issues created by users who may not know how to resolve them.
ARIS Enterprise – SAP Solutions	
Enable ARIS for syncing process information with SAP Cloud ALM: Process model sync	Enable ARIS to synchronize ARIS model information as custom processes into SAP Cloud ALM. The respective links to the ARIS factsheets will be made available as assets in SAP Cloud ALM.
Enable synch ARIS - SAP Cloud ALM: Project administration	ARIS needs administrative capabilities to manage and SAP Cloud ALM destinations and configure ARIS accordingly for importing models as custom processes.
Enable synch ARIS - SAP Cloud ALM: Solution processes – graphic	Enable ARIS to synchronize ARIS model information as custom processes into SAP Cloud ALM, making the graphic of processes available in SAP Cloud ALM in SVG format.
Change the standard name for ARIS document link URL to the actual scenario/process name	Include the scenario or process name into the ARIS document link (instead of "ARIS model"), allowing customers to easily find the best fitting link without additional manual work on SAP Solution Manager side. *Based on customer idea ARISRPA-I-127*
Make system independent executable URLs available via synchronization with a Custom URL	System-independent paths to executables in SAP system will reduce manual testing activities and enable automated testing on SAP side. *Based on customer idea ARISSO-I-5*
ARIS Process Mining SaaS	
Introducing user groups	Assign rights to both user groups and individual users for full control over access management.
Data pseudonymization during extraction of source tables	Pseudonymize sensitive data before it enters ARIS Process Mining to protect valuable information and maintain confidentiality.
Variable event log definitions	Define alternative perspectives on a process with variable event log definitions, allowing remapping activities and cases to other variables or fields. *Based on customer ideas ARISPMIYU-I-67, ARISPMIYU-I-115*
Share findings via bookmarks	Easily share valuable process mining findings, such as insights, best practices, and discoveries with others by creating bookmarks, fostering a collaborative environment that drives innovation and efficiency.
Process Quick Checks	Expand process compliance functionality by defining the 'compliant process' as 'one or more of the discovered process variances' rather than having to capture the compliant process as a BPMN in ARIS and import it into ARIS Process Mining *Based on customer ideas ARISPMIYU-I-60, ARISPMIYU-I-107*

ARIS 10 SR24 feature	Feature description
ARIS Process Mining SaaS	
Access rights at data level	Empower users with tailor-made access control. Define precise access rights at the data level, filtering by region, time frame, or any other criteria. *Based on customer idea ARISPMIYU-I-105*
Gallery 2.0 - Adding data to the installation.	Enhance the Gallery experience with data-rich accelerators and captivating demos, providing instant access to invaluable resources without needing to extract and upload data.
Companion in ARIS Process Mining	Prompt a generative AI agent via a built-in integration with the ARIS Process Mining UI.
