

ARIS for SAP[®] Solutions

Can you afford bad SAP results? Get it right with ARIS.

To apply your corporate strategy to your business processes, you need a fast and efficient way to map those processes and business concepts to your SAP environment. ARIS for SAP Solutions is your answer. It bridges the gap between business and SAP by engaging all teams, from business blueprint to go-live. Use it to accelerate designing, implementing and optimizing SAP projects. Ensure that your end users are perfectly trained with ARIS and SAP Enable Now. Last but not least, ARIS for SAP Solutions helps you to manage your migration to SAP S/4HANA[®] successfully.

Why ARIS for SAP Solutions?

Concentrate on business and secure your competitive advantage with a best-in-SAP-class solution. The proven ARIS solution helps you to reduce project times by up to 40 percent, fasten rollout by 30 percent and reduce costs all along the way. ARIS for SAP Solutions connects ARIS with your SAP landscape and offers a deep integration with SAP[®] Solution Manager and SAP Enable Now. It helps you to accelerate a successful migration to SAP S/4HANA.

Key benefits

- Smooth SAP projects planned ahead from S/4HANA migration to world-wide rollouts
- Optimized SAP project outcomes thanks to process focus
- Comprehensive understanding of SAP solution incl. architecture & processes
- Seamless integration of business processes and SAP environment
- Clear communication and collaboration across all departments and locations
- High end user acceptance and comprehensive SAP trainings
- Reduced risks with process-based and high-quality testing

Faster change management & continuous improvement

Features Features

Design your SAP processes

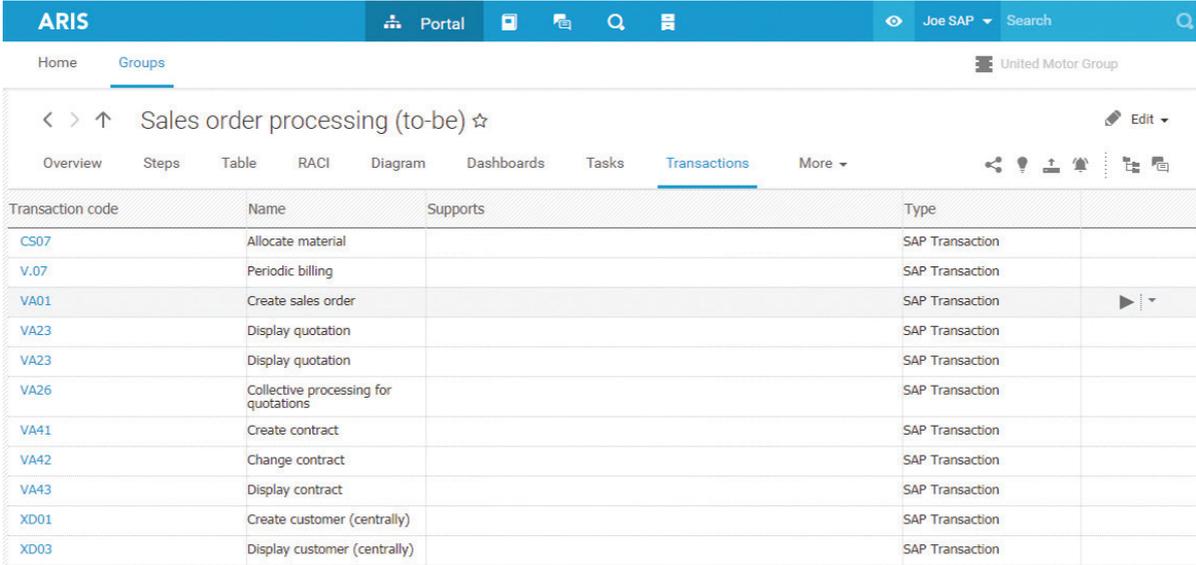

ARIS for SAP Solutions supports both SAP and non-SAP modelers so that business and IT can work on common process models in one central repository (single source of truth). To design your SAP processes, a special SAP wizard guides you through creating consistent SAP processes, which are ready for synchronization with SAP Solution Manager 7.2. ARIS for SAP Solutions supports SAP-specific concepts, such as branches and global attributes.

This ensures compliance with SAP-specific modeling conventions. To jump start modeling SAP processes, you can re-use SAP-related reference content, such as:

- Software AG's industry best-practice content for SAP, Performance.Ready
- SAP and the Process Step Library
- Re-documentation results showing as-is processes based on real system usage

Align with SAP Solution Manager

Synchronizing ARIS knowledge with SAP Solution Manager ensures the implemented SAP solution is not led by technical requirements but business, increasing quality and minimizing risks. The business process structure synchronized between ARIS and SAP Solution Manager includes SAP-specific objects like executables as well as structure elements, such as process steps and the overarching process diagrams. The bidirectional interface also supports the download of relevant organizational and master data into ARIS, exchange documents as well as the creation and download of process diagrams, whether EPC or BPMN 2.0.

Transaction code	Name	Supports	Type
CS07	Allocate material		SAP Transaction
V.07	Periodic billing		SAP Transaction
VA01	Create sales order		SAP Transaction
VA23	Display quotation		SAP Transaction
VA23	Display quotation		SAP Transaction
VA26	Collective processing for quotations		SAP Transaction
VA41	Create contract		SAP Transaction
VA42	Change contract		SAP Transaction
VA43	Display contract		SAP Transaction
XD01	Create customer (centrally)		SAP Transaction
XD03	Display customer (centrally)		SAP Transaction

Tight integration between ARIS and SAP Solution Manager

“ Getting ARIS is like hiring the world’s best player to join your team. ”

— Fibabanka

ARIS is available in three different editions to fit the needs of your organization. Learn more on [ariscloud.com](https://www.ariscloud.com) and start your **free trial now!**

ARIS Basic

- Perfect for starting process design
- Easy to use
- Fast results

ARIS Advanced

- Next stage in productivity
- Most powerful design & reporting options
- Flexible reporting

ARIS Enterprise

- Your enterprise-wide cloud
- Firsthand top-notch innovations
- Enjoy professional ARIS capabilities and customize with extensions

The Enterprise edition can be customized to your needs with ARIS Extensions:

Risk & Compliance, Rollout Add-ons, Simulation, SAP® Solutions, Premium Document Storage, SharePoint Integration, 3rd Party Integration, Robotic Process Automation

About ARIS

- ARIS combines best-of-breed business process analysis, process mining and compliance
- Based on 25+ years of business process experience
- Trusted by more than 10 million end users and 10,000+ customers
- Biggest BPM community worldwide with more than 600,000 fellow ARIS users on www.ariscommunity.com

“ Complete end-to-end process information on both the business and IT side. ”

Testing to ensure success

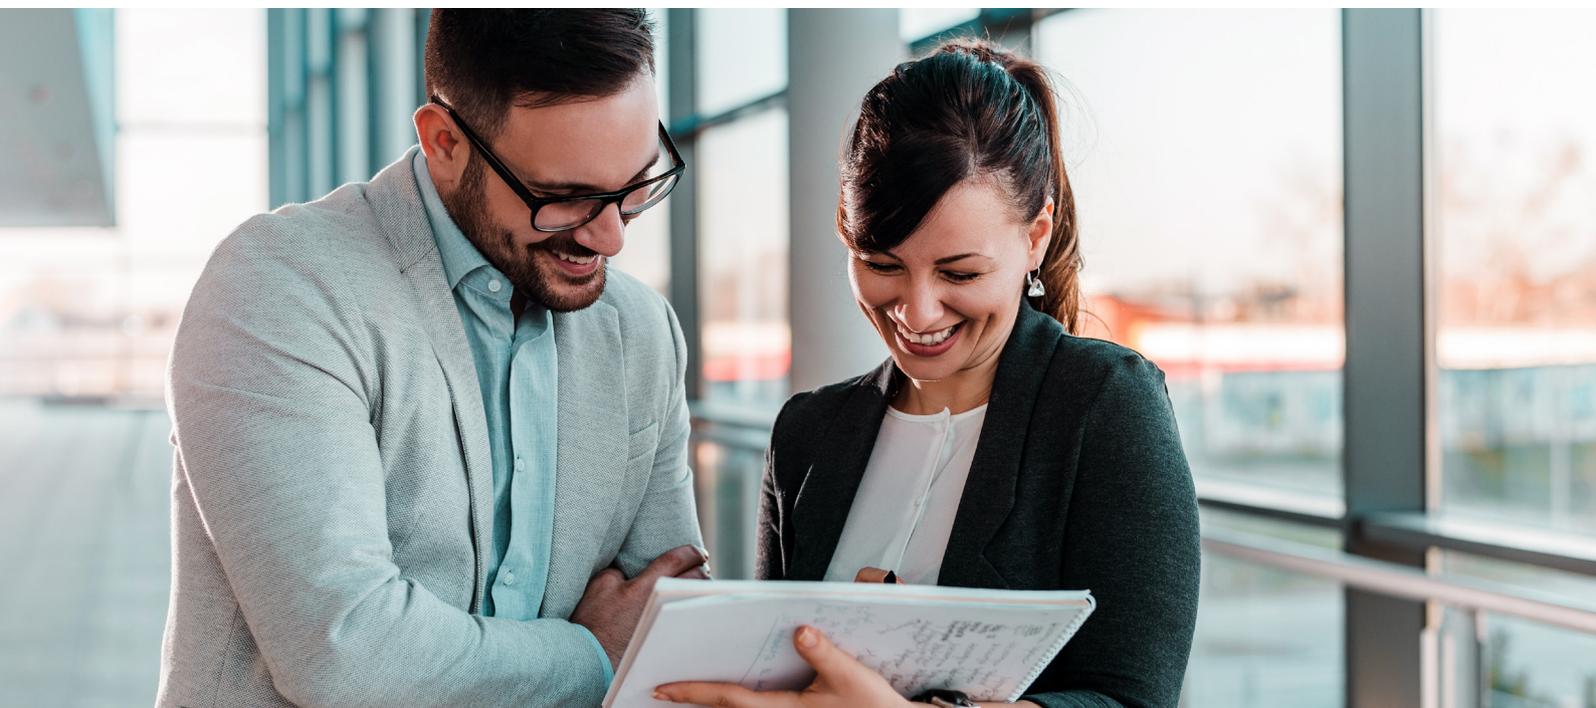

ARIS for SAP Solutions enables process-orientated testing and eliminates double work by re-using existing ARIS process knowledge. ARIS for SAP Solutions accelerates and optimizes test design including test cases creation, end-to-end test case descriptions, test sequence graphs, and transferring these test scenarios into the SAP Test Workbench or other standard test management tools for test execution.

Success lies in knowledge—train end users with ARIS and SAP Enable Now

As you transform your business or implement new business-critical technologies such as SAP S/4HANA, defining and adapting your business processes is essential—but not enough. You need to ensure that all employees who are involved in changed/transformed processes are aware of their new ways of working. For this to happen successfully, they must be properly trained.

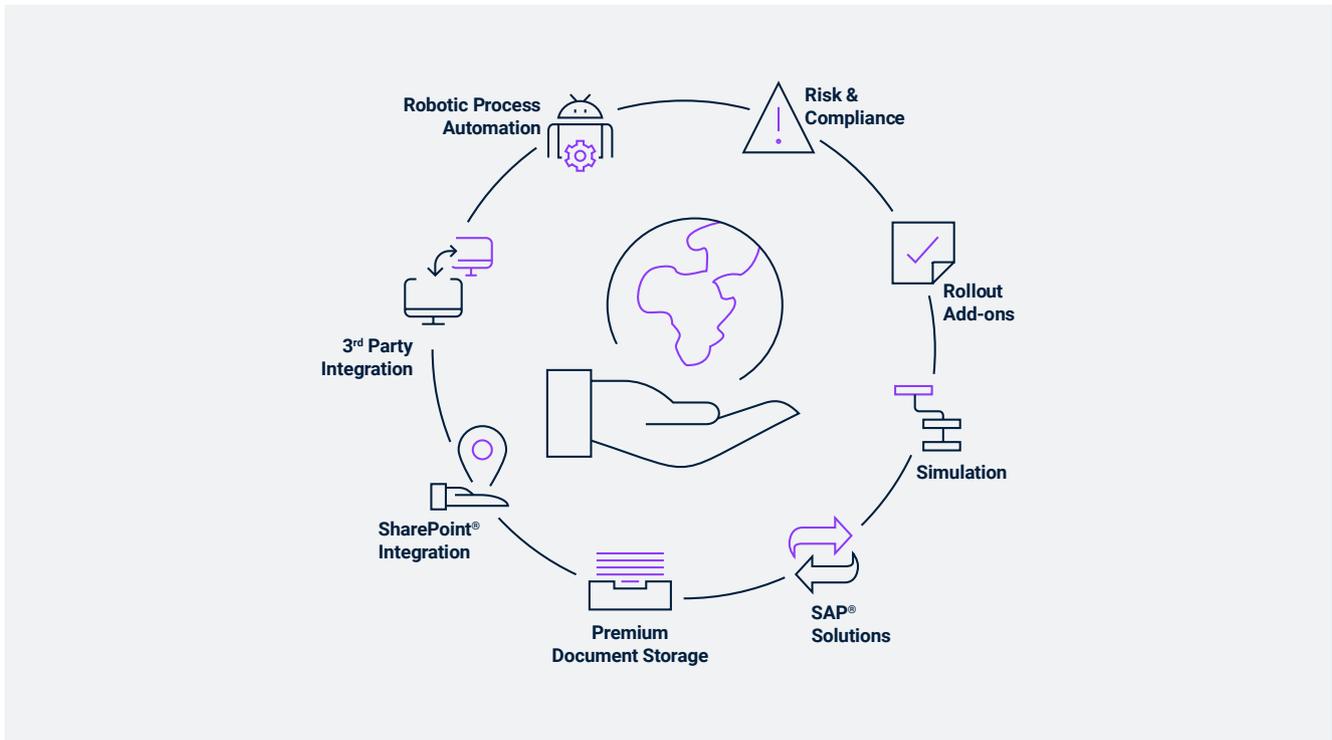

ARIS is the leading tool for process design, approval and publication and supports the entire process lifecycle from strategy definition, blueprinting and testing to communication and end user training. SAP Enable Now is the leading tool for designing, approving, and publishing training. It supports rollout and change management procedures as well as the creation and delivery of e-learning and user documentation.

Together, ARIS and SAP Enable Now ensure better training towards end users including process and SAP knowledge at once and communication of processes to end users.

Make sure everyone participates in the continuous improvement process

Communicate the solution and its underlying processes to end users and get feedback from your organization to improve the SAP solution and templates while under construction. Users can collaborate on a central platform and contribute their ideas immediately. Published processes are the starting point for optimization or rollout projects. Stakeholders have constant access and can review and adapt processes based on workflow-based change request management processes.

ARIS extensions

You can extend ARIS Enterprise just as you need it—according to your needs and projects. The ARIS extensions are here to support your expert use cases.

Risk & Compliance adds capabilities

for integration of regulatory demands & operational risks into a single approach and Internal Control System (ICS).

Rollout Add-ons set up and manage confirmation workflows.

Simulation adds capabilities

to test whatif scenarios and get information about bottlenecks & improvement potentials.

SAP® Solutions adds capabilities to support holistic implementation & rollout of SAP projects, testing, communication, training & go-live support.

Premium Document Storage allows ARIS to be used for storage of up to 1 million documents.

SharePoint Integration supports users to work with SharePoint and ARIS in an integrated manner.

3rd Party Integration allows integration with 3rd party applications based on an API.

Robotic Process Automation adds a “workforce” of software robots to automate repetitive manual tasks and processes, fully integrated into your process landscape, and working in an unattended mode.

Migrate successfully to S/4HANA with ARIS for SAP Solutions

Migrating to a new SAP environment brings new challenges that affect your processes, applications and architecture. ARIS for SAP Solutions guarantees transparency and deep understanding of the impacts of the transformation towards S/4HANA.

Typically used for a:

- New SAP implementation
- System conversion
- Landscape transformation

ARIS is well-aligned with SAP Activate, a methodology and procedure model with best practice content to support SAP implementations. If you're looking to optimize your migration to S/4HANA, ARIS for SAP Solutions is your answer!

The road to SAP S/4HANA success

ARIS in action

Enhanced quality "We achieved cost reductions up to 40%."

Increased efficiency "We saved up to 3 millions Euros."

Reduced IT implementation times "We could save 30% time per rollout project."

Improved business transparency "We are now able to run 50% faster searches in the database."

Increased process agility "We saved 25% on our development costs."

Take the next step
