## Corrections Required

Please note that z/OS 2.4 does no longer supports the following DIAGxx parmlib statements:

- VSM ALLOWUSERKEYCSA(YES)
- ALLOWUSERKEYCADS(KEY)

This applies to the following Software AG products:

### Adabas Parallel and Cluster Services (ASM/ALS)

Run the Adabas nuclei and ADACOM in a system key via alias ADARUNK

(see the Adabas Installation Manual, chapter "Modifying the z/OS Common Storage (CSA) Key").

### Adabas System Coordinator (COR)

Set the Daemon Run-time Parameter **DSPSCOPE = ALL**

(see the Adabas System Coordinator manual, chapter "Daemon Runtime Parameters").

The following fixes must be applied and active in all components (client, daemon, database) across all systems (LPARs) before the use of DSPSCOPE=ALL is considered for any daemon within a group involving those systems:

Adabas System Coordinator: MI831003, MI8311004

Adabas Fastpath: AW822058

## Natural (NAT)

When using the Natural Global Buffer Pool the installation of the Natural Authorized Services Manager is mandatory (see the Natural manual, chapter “Operating the Natural Global Buffer Pool”). Natural 9.1.1 requires fix NAT911L001 and Natural 8.2.7 requires fix NAT827L009 or above.

Please use Software AG’s Empower or contact Customer Support to obtain corrections for Software AG products.
