

## ARIS installation services

Are you making a new start with ARIS? Our experts will help you with the analysis of a suitable infrastructure and carry out the necessary technical installation of the product components for you. As a matter of course we create installation documentation and hand over the ARIS environment to you for its productive use. We support you with the connection to authentication systems and configure the corresponding rights for you.

### IT-Architecture Management for the implementation of ARIS Platform

- Hardware sizing, ARIS system landscape development

### Installation of all ARIS Platform products at customer site

- Product update at the customer / new installation
- Data migration: transfer of databases, configurations, conventions (filter, templates) from one to another server
- Validation of installation / update
- Documentation of installation / upgrade

### Implementation of complex installations as package

- Cluster, NAD, load balacing, fail-over, etc.

### On-site ARIS „Inspection“ – Performance analysis
